

Master’s student in Computer Science with strong interest in cloud computing and infrastructure. Experienced in cloud technologies, system design, and problem solving through academic projects. Seeking a Cloud Engineer internship to apply my skills, contribute to scalable cloud solutions, and grow into a cloud engineering role.

SKILLS

Tools	AWS, Wordpress - website develop
Programming Languages	Python, Hypertext Markup Language(html), R programming
Database	Structured Query Language(SQL)

TECHNICAL EXPERIENCE

Website Developer - Intern <i>Qressy Solutions</i>	May 2023 — July 2023 <i>Hyderabad, India</i>
- Developed and maintained responsive websites using the WordPress platform. - Customized themes, layouts, and plugins to meet project requirements. - Improved website usability, performance, and overall user experience. - Managed website content, updates, and basic troubleshooting. - Collaborated with team members to design and deploy user-friendly websites.	

EDUCATION

Master’s in Computer Science , <i>University of New Haven</i>	Aug 2024 - Dec 2026
Bachelor’s in Computer Science , <i>GITAM</i>	May 2020 -May 2024

WORKSHOP

Creating Dashboards Using Google Looker Studio <i>Certified by Skill Nation for developing interactive data dashboards and visualizations using Google Looker Studio.</i>
Creating Dashboards Using Python and R Programming <i>Certified by GITAM for creating data-driven dashboards using Python and R for data analysis and visualization.</i>
Arduino Potencia <i>Completed a hands-on workshop by GITAM, working with Arduino microcontrollers, sensors, and embedded system programming.</i>

CERTIFICATION

• Cloud Computing Basics (Cloud 101) — LearnQuest View Cretificate	JAN 2023
• Structured Query Language — Intellipaat View Cretificate	NOV 2022
• Python for Data Science, AI Development — IBM View Cretificate	FEB 2021

ACADEMIC PROJECTS

Monitoring Urban Sprawl Using Machine Learning and Cloud Computing <i>Gandhi Institute of Technology and Management</i>	<i>Jul 2023 – Oct 2023</i>
- Built a machine learning pipeline using Landsat and LULC data to analyze urban sprawl. - Processed large-scale geospatial datasets in Python and deployed scalable workflows on Microsoft Azure. - Applied deep learning models for land cover classification and urban boundary detection, improving accuracy in environmental monitoring.	
Simulation of Green Cloud Computing Using Load Balancing Techniques <i>Gandhi Institute of Technology and Management</i>	<i>Jan 2024 - April 2024</i>
- Simulated a green cloud computing environment using CloudSim and GreenCloud to evaluate energy-efficient load balancing in data centers. - Implemented Round Robin and Least Connections algorithms to optimize workload distribution and resource utilization. - Analyzed server performance and energy consumption to improve sustainability, reliability, and overall cloud efficiency.
